

Halliburton's Lost AmBe Source. The source is still missing. BRC interviewed the three drivers in the convoy when the source was lost. None of them noticed anything unusual. A very diminished search continues. ASPECT personnel want to do some refinement on their equipment. They would like Halliburton to open a similar source as ASPECT flies overhead. This would allow ASPECT to see what their equipment would detect with the lost source. Messages and emails have been sent to Halliburton. ASPECT is also working with CST and BRC.

Bayou Corne. The drilling will restart 9/19/12. Air monitoring by EPA START will begin the following morning. Drilling will be only during daylight hours. The drilling is getting close to the cavern and the science group and others want to be there as the drilling enters the cavern. LDEQ has asked EPA to conduct all the air monitoring at the Texas Brine facility.
